This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

1. A method of utilizing a memory of a printer printing using emulation information stored in a first or a second memory, the method comprising:

storing emulation information selected from among a plurality of emulation information stored into the first memory into a predetermined storage area of the second memory when the printer is initialized;

analyzing a type of emulation information of printing data transmitted to the printer;

determining whether a type of the emulation information stored into the predetermined storage area of the second memory matches the type of the emulation information analyzed;
and

if the type of the emulation information stored into the predetermined storage area does not match the type of the emulation information analyzed, retrieving emulation information from the first memory corresponding to an emulation information type matching the type of the emulation information analyzed and replacing emulation information stored in the second memory with the retrieved emulation information. ~~replacing the stored emulation information comprising retrieving an emulation information type from the first memory matching the type of the emulation information analyzed and storing the retrieved emulation information into the predetermined storage area of the second memory in which the replaced emulation information was stored.~~
